Foreword	i
Preface	iv
General aspects of bond	3
1. Bearing angle model for bond: factors influencing bond strength	4
2. Bond issues at the dapped ends of indirectly-supported R/C beams and slabs	22
Anchorage and laps of bars and prestressing tendons	36
3. Anchorage in high-strength concrete of bars terminated with 90-degree standard hooks	37
4. Design of reinforcing bar anchorages for tension loading	53
5. An appraisal of ACI 318 rules for design of tension splices	60
6. Recommended provisions and commentary on development length for high-strength reinforcement in tension	82
7. Experimental investigation on bond of large-diameter reinforcing bars	98
8. Influence on lap strength of lap length, shear and staggering of laps	110
9. Experimental results on the local bond behavior of bars in bundles	122
10. Bond of prestressing tendons	137
Bond under severe conditions	173
11. Effect of high temperature on bond behavior between reinforcement and concrete	174
12. Recent developments in design of pre-cast and post-installed rebar connections under temperature	188
13. Residual bond performance after exposure to different heating regimes – elevated temperature vs. fire	200
14. Reinforcement to concrete bond in inelastic regions of RC frame members	213

Degradation of bond for corrosion	229
15. Testing of bond for corroded reinforced concrete specimens	230
16. Assessment of corroded reinforced concrete structures in natural environment	247
Bond in new types of concrete	259
17. Bond behavior of steel bars embedded in lightweight concrete	260
18. Bond behaviour between reinforcing steel bars and FRC under monotonic loading	284
19. Crack widths in RC and R/FRC elements under repeated actions	299
