

Contents

Foreword	i
Notations	v
1. Introduction	1
2. SLS and durability	3
2.1 Cracking and its relation to the durability	3
2.2 Design crack width and durability	5
2.3 Comparison of the measured and design crack width	7
2.4 General recommendation for the design with respect to the durability	8
3. SLS verification at new structures	13
3.1 Stress analysis	13
3.1.1 Introduction	13
3.1.2 Stress limits	13
3.1.3 Calculation of stresses	15
3.2 Crack width analysis	16
3.2.1 Calculation of maximum crack width regarding crack stage, bond law and redistribution of stresses after cracking	16
3.2.2 An alternative crack width calculation model	33
3.2.3 Cracking analysis based on the effect of primary and internal cracks	54
3.2.4 Aspects considered for the drafting of MC2020	62
3.2.5 Cracking of prisms with multiple bars	83
3.3 Deflection analysis	103
3.3.1 Introduction. Levels of approximation	103
3.3.2 Deflections due to bending	105
3.3.3 Deflections due to shear	157
3.3.4 Two-way slabs	177
3.3.5 Deflection analysis – examples	189

4.	SLS verification of existing structures	218
4.1	Introduction	218
4.2	Main requirements for the serviceability of existing structures	218
4.2.1	Residual service life	219
4.2.2	Residual usage	219
4.2.3	Stress level limitation	219
4.2.4	Crack opening limitation	219
4.2.5	Deformation limitation	219
4.2.6	Vibration limitation	220
4.3	Data collection as input for verification models	220
4.3.1	Investigation of documentation	220
4.3.2	Investigation on site	221
4.4	Conclusions	223
5.	SLS verification using numerical methods	225
5.1	The crack width database	225
5.1.1	Vilnius Tech tests	225
5.1.2	Braam (1990) ^[5-14] deep beam test	228
5.2	Finite element modelling	229
5.3	Parametric case study	232
5.3.1	Model uncertainty definition	232
5.3.2	Crack width uncertainty analysis	232
5.3.3	Discussion of model quality	234
5.4	Detailed cracking analysis of typical beams	235
5.4.1	Crack initiation stage	235
5.4.2	Stabilised cracking	236
5.4.3	Deep beam analysis	238
5.5	Engineering approach	240
6.	Conclusions	244
